PELLET DEICER

DESCRIPTION

These pellets are a fast and economical way to melt unwanted ice and snow as low as -25°F. The powerful blend of calcium, sodium, and potassium chloride is 36 times faster than rock salt and will melt 46 times its weight. These pellets are noncorrosive to concrete, and non-harmful to grass. They can be safely used on cement, concrete, black top, tar, flagstone, brick and wood surfaces.

These pellets release heat to spread horizontally under the ice formation, so that a large area of ice is loosened by each pellet. Melted ice and snow will not refreeze, even at sub-zero temperatures, for periods up to 12 hours.

DIRECTIONS

Application rates vary, and quantity and melting action depend upon temperature and thickness of ice and snow. For temperatures above 5°F, use 1/2 to one pound per square yard of ice. At 0°F, use 1 - 2 pounds. Spread evenly over the surface with a scoop, shovel or mechanical spreader.

When pellets have penetrated and cracked loose the ice layer, remove melted slush. Spread sparingly and evenly with a scoop, shovel or mechanical spreading equipment.

NFPA® RATINGS

Health: 1; Flammability: 0; Reactivity: 0

CONTAINS/CAS NUMBER:

Calcium Chloride/10043-52-4; Sodium Chloride/7647-14-5; Potassium Chloride/7447-40-7; Water/7732-18-5
