WELDING COOLANT GEL

Protects heat sensitive surfaces

Welding Coolant Gel is an easy to use, gel barrier that shields surfaces from the intense heat generated during various welding operations. The viscous formula stays in place on surrounding surfaces made of metal, wood, wallboard, insulation, and other construction materials to protect them and prevent the transfer of heat beyond those surfaces.

PRODUCT FEATURES

- Concentrated cooling gel absorbs heat to protect surfaces and components while soldering, brazing or welding
- Gels on contact for no-drip coverage
- Odorless, skin-safe, non-toxic and easy clean-up

APPLICATIONS

- Spray WELDING COOLANT GEL on surface to be protected from heat source.

PRODUCT SPECIFICATIONS

- Product Size: Quarts
